L15: Entry 3 of 7

File: USPT

Jan 11, 2000

DOCUMENT-IDENTIFIER: US 6014700 A

TITLE: Workload management in a client-server network with distributed objects

Detailed Description Text (16):

Next, the server groups 44 adds up the columns in the table to obtain a combined rank, which takes into account both policies. In the example of FIG. 5, server1 is selected because it has the lowest combined rank (a rank of 0) and thus is taken to have the highest priority as compared to the other servers (server2 and server3) which have higher ranks (1 and 2 respectively).
